

AtSource Recycling Systems Corp., a leading supplier of Waste & Recycling handling equipment works closely with commercial, industrial and government organizations across Canada to reduce landfill waste, increase commodity recycling and decrease waste & recycling expenses.

AtSource provides advanced, custom waste & recycling systems designed to assist customers in many facets of waste & recycling management.

In one such example of a Commercial Grocery Store waste & recycling implementation in the province of BC, AtSource recommended and installed two remanufactured vertical compactors (VIP) to replace an old, poorly maintained VIP and an open top (or loose) cardboard container. The customer was having several significant issues with its' equipment including:

- **Vagrants searching the units creating employee safety issues, and daily labor to clean up the mess**
- **The area was unsightly and had odor problems**
- **There was no maintenance on the units**
- **Rodent and vector/bird issues**
- **Improper hauling services creating additional expense and environmental issues**

Further the compactor was in disrepair and was not compacting as per manufacturers specifications which resulted in improper service levels and additional hauling expenses.

After initial consultation and investigation, several recommendations were proposed and implemented.

AtSource Solution:

- Replacement of old, un-maintained VIP
- Replace open top container with VIP
- Reduce service levels to meet newly compacted volumes
- Implement proper maintenance program

The result of the properly sized and installed VIP units was a significant reduction in waste & recycling service levels, elimination of mess and odor, and the new sealed units prevented all vagrant issues. Additionally the new compacted units require less service which directly translates to less vehicle emission and Green House Gasses.
