

**AtSource Recycling Systems Corp.**, a leading supplier of Waste & Recycling handling equipment works closely with commercial, industrial and government organizations across Canada to reduce landfill waste, increase commodity recycling and decrease waste & recycling expenses.

A major Hotel & Casino recently contacted AtSource to assist them with waste and recycling handling in order to improve and streamline the process, remove unsightly trash bins from customer view and decrease expense.

The customer had implemented several standard open top waste and recycling containers spread across the resort grounds. The servicing of all these units took time causing problems for customer access to parking and created unsightly areas around the waste containers. The client was also spending a great deal more for waste removal and not seeing any value for recycling commodities.

- **The area was unsightly for visitors**
- **There were odor problem**
- **The units were spread across the grounds using space and creating service problems**
- **Rodent and vector/bird issues**
- **Improper hauling services creating additional expense and environmental issues**

After initial consultation and investigation, several recommendations were proposed and implemented.

#### **AtSource Solution:**

- Centralize waste and recycling with newly implemented collection and handling practices
- Replacement of the non-compacted open top units with sealed compactors
- Implement a Pressure Gauge system to ensure compactors were full before servicing
- Reduce service levels to meet newly compacted volumes
- Implement proper maintenance program

By installing a high volume or “double stacking” waste and recycling units the hotel did not lose any dock space and the sealed compactors unit eliminated the unsightly waste area, liquid seepage and odor.

The resulting system and process created a far better customer experience and provided an annual savings in excess of \$30,000. Additionally the new compacted units require less service which directly translates to less vehicle emission and Green House Gasses.

To learn more about the AtSource Advantage and how you can benefit from one of the nation’s most experience waste & recycling system experts, call today for a no obligation waste & recycling review.
