

AtSource Recycling Systems Corp., a leading supplier of Waste & Recycling handling equipment works closely with commercial, industrial and government organizations across Canada to reduce landfill waste, increase commodity recycling and decrease waste & recycling expenses.

When it comes to management of commercial properties esthetics is as great a concern as expense and customer/tenant satisfaction. Property management companies work extremely hard at providing an excellent location for business.

When a local property management firm contacted AtSource to review their waste and recycling process they required a solution uniquely tailored to the property and it's tenants. The property was having issues with the expense of excessive servicing of their waste and recycling containers. Further the waste and recycling compound was continually cluttered and presented a poor image.

- **The area was unsightly for visitors**
- **There were odor problem**
- **Rodent and vector/bird issues**
- **Frequent hauling services creating additional expense and environmental issues**

After initial consultation and investigation, several recommendations were proposed and implemented.

AtSource Solution:

- Replacement of the non-compacted open top units with sealed compactors
- Reduce service levels to meet newly compacted volumes
- Implement proper maintenance program

Through the use of Vertical Compactors (VIP's) the waste and recycling volumes were compacted at a 6 to 1 ratio which created a significant reduction in hauling services and an increase in commodity value. Further the area now presented a much better image as the area was clean and odor free.

By using color coded compactors waste and recycling were separated and reduced contamination.

To learn more about the AtSource Advantage and how you can benefit from one of the nation's most experience waste & recycling system experts, call today for a no obligation waste & recycling review.
