

AtSource Recycling Systems Corp., a leading supplier of Waste & Recycling handling equipment works closely with commercial, industrial and government organizations across Canada to reduce landfill waste, increase commodity recycling and decrease waste & recycling expenses.

In Victoria, B.C. one of the premiere hotels turned to AtSource to help with their cardboard recycling and waste disposal troubles. The waste and cardboard collection containers were being serviced far too frequently with large trucks rumbling through the parking area disrupting hotel guests. As well, the size and placement of the open bins required the staff to pre flatten the boxes and then lift up almost 6' to the open top container for recycling and disposal.

Concerned about employee safety and with a focus on customer satisfaction, hotel management knew they needed to make a change that would help them achieve a smoother, straightforward collection and recycling method.

- **Collection services were extremely disruptive to visitors**
- **Unsightly conditions and odor issues**
- **Employee safety handling concerns**
- **High costs**
- **Frequent hauling services creating additional expense and environmental issues**

After initial consultation and investigation, several recommendations were proposed and implemented.

AtSource Solution:

- Replace the open top cardboard containers with a high compaction baler
- Compacted cardboard bales sold for revenue
- Replace non-sealed leaking waste container with sealed unit compactor
- Reduce service levels to meet newly compacted volumes of waste and cardboard for additional savings
- Implement proper maintenance program

Both waste and recycling collection units were replaced with AtSource units offering significant savings and reduction in impact on visitors.

By baling the cardboard service frequencies were significantly reduced and the bales were sold creating positive revenue.

Through the implementation of an AtSource sealed compactor for waste collection and properly scheduled services, additional savings were achieved. Further, the area now presented a much better image as the area was clean and odor free.
